

regulation ō

regulation of synaptic synaptic regulation of

cell recognition neuron recognition neuron recognition regulation of GTPase activity positive regulation of hydrolase activity regulation of hydrolase activity regulation of hydrolase activity regulation of hydrolase activity for the company of t cellular homeostasis
negative regulation of catabolic process
multicellular organism aging riginical organism aging cell growth locomotory behavior adult behavior regulation of cellular localization protein localization to membrane protein localization to membrane neuromuscular synaptic transmission membrane organization regulation of synaptic growth at neuromuscular junction synaptic growth at neuromuscular junction synaptic growth at neuromuscular junction of supramolecular fiber organization regulation of actin cytoskeleton organization regulation of actin filament-based process regulation of endocytosis regulation of vesicle-mediated transport receptor-mediated endocytosis import into cell endocytosis ovarian follicle cell migration border follicle cell migration response to toxic substance response to ethanol response to antibiotic response to drug learning or memory cognition regulation of transferase activity regulation of kinase activity regulation of cellular response to stress stress-activated protein kinase signaling cascade MAPK cascade
